

Passive Holder for Mobile Phones

With your mobile in place

The passive holder is small, neat and discreet. It ensures that your phone is held in an upright position for better reception. The holder usually accommodates all battery sizes and can be used with cigarette lighter cables and headsets.

A passive holder is already available when a new phone model has been released on the market.

The holder is manufactured in black ABS plastic which can withstand temperatures of up to 100°C (212°F).

There are passive holders with and without a tilt swivel. If you choose a holder with tilt swivel, you can easily adjust the angle of your mobile for better viewing and avoiding light reflection.

Attach the holder onto a ProClip Mounting Platform and you will always have your phone within easy reach. Safe and convenient!

There are passive holders available for most mobile phones. For a complete range, please visit www.brodit.se
