

Keep things within reach

Charges five devices!

5 way desktop charging dock

for Samsung Galaxy Tab Active 8.0 SM-T365 with original skin

Brodit has developed a desktop charging dock for simultaneous charging of five tablets. The charging dock is used by haulage contractors, warehouses, schools and offices, as well as within health care, police and civil protection; everywhere where tablets are used in daily operation. The desktop charging dock can handle up to five devices simultaneously, it takes up minimum space and if using many tablets, several charging docks can be neatly placed next to each other.

'Grab-and-go': You can easily grab your tablet on the go. The dock charges the device via the connector on the long side. Just place the device in the charging dock and the charging starts instantly. The desktop charging dock is provided with cellular rubber feet so it will not slide on the table surface. There are also threaded screw holes in the bottom for attaching the charging dock onto a tabletop or in a charging cabinet.

Charging is indicated by a red light in front of each charging slot, when the tablet is fully charged the diode switches to green. Charging performance is unaffected by the number of devices. An empty battery takes about 8 hours until fully charged.

Specification:

- Built-in 1,5A fuse/slot (not replaceable).
- Short circuit protected.
- Two M5-threaded holes in the bottom for attachment.
- Type approval tested according to council directive 72/245/EEC.
- FCC-approved
- Weight: 1850g.
- Dimensions: 179x235x47 mm (WxLxH).
- Made of black Acetal plastic.
- Charging: Output on pogo pins max 1,3A.
- 110/240V
- Manufactured in Sweden.
